

Recovery after laparoscopic colonic surgery with epidural analgesia, and early oral nutrition and mobilisation

*I Bardram, P Funch-Jensen, P Jensen, M E Crawford,
H Kehlet*

Lancet 1995; 345: 763

The first two patients in the programme were not discharged until day 3, despite having normal bowel function on day 2, because of logistic or personal problems. The next six patients followed the scheduled plan and went home on the 2nd postoperative day. 1 month postoperatively all patients were back to normal function. They were very satisfied with the entire perioperative course and all would recommend the procedure to others; no one felt they had been discharged too early.
